

This document outlines the exact mathematical logic used by the **Fhoneify** application to calculate the "Get Upto" estimated price and the final quoted price after device diagnostics.

1

Competitive Markup Logic - The "Get Upto" Price

When a customer selects their device model and storage variant, the application fetches the **raw baseline market price** (derived from real-time competitors like Cashify). A tiered percentage markup is immediately applied to ensure Fhoneify always offers a superior, competitive price.

TIER 1 - BUDGET / ENTRY

+8% Markup

Baseline Price $\leq$ Rs. 20,000*Formula: Fhoneify Base Price = Baseline Price $\times$ 1.08*

TIER 2 - MID-RANGE

+6% Markup

Rs. 20,000 < Baseline Price $\leq$ Rs. 50,000*Formula: Fhoneify Base Price = Baseline Price $\times$ 1.06*

TIER 3 - PREMIUM

+4% Markup

Baseline Price > Rs. 50,000*Formula: Fhoneify Base Price = Baseline Price $\times$ 1.04*

Example - iPhone 13

Competitor Baseline Price	Rs. 23,950
Tier Applied	Tier 2 (> 20K, $\leq$ 50K) $\Rightarrow$ +6% Markup
Calculation	Rs. 23,950 $\times$ 1.06
Customer Sees	"Get Upto Rs. 25,387"

The "Get Upto" price assumes the device is in **absolutely flawless condition**. As the customer proceeds through the **7-stage diagnostic questionnaire**, they declare any functional or cosmetic defects. Upon completing registration and OTP verification (Stage 7), they reach **Stage 8** where the **Condition Multiplier** is applied to the Fhoneify Base Price.

Condition Multiplier Tiers

A

Flawless / Like New

1.0x -> 100% of value

0 defects, 0 hardware issues, original screen, perfect touch & cellular calls

B

Good Condition

0.85x -> 85% of value

Minor cosmetic defects OR exactly 1 minor hardware issue, core functions perfect

C

Fair Condition

0.65x -> 65% of value

Non-original screen, display glass broken, OR back glass broken

D

Poor Condition

0.40x -> 40% of value

Touch screen failure, cannot make/receive calls, OR 2+ hardware component failures

WARNING Minimum Price Guarantee: No matter how severe the device condition, the final quoted price will **never drop** below a hardcoded minimum of Rs. 500.

Device: Apple iPhone 15 Pro (128GB) | Competitor Baseline: Rs. 62,600

Step-by-Step Calculation	
Tier Applied	Tier 3 (> 50K) => +4% Markup
Step 1 - Markup Applied	Rs. 62,600 x 1.04 = Rs. 65,104
Customer Sees	"Get Upto Rs. 65,104"
Step 2 - Diagnostics	Customer declares: Display is broken
Condition Evaluated	Fair Condition => 0.65x Multiplier
Step 3 - Final Quote	Rs. 65,104 x 0.65 = Rs. 42,317.60
Customer Sees at Stage 8	Final Guaranteed Price: Rs. 42,318
